Introduction

This is the second edition of the *Union List of Foreign Topographic Map Series in Canadian Map Collections*.

The first edition was published in four volumes in 1973 and 1974. Its title, *List of Map Series in the Foreign Section* [of the National Map Collection] was deceptive, since the work indexed the holdings in eighteen Canadian map collections.

The present edition describing 2,046 map series was prepared on the basis of data collected from twenty-six collections, including twenty-four university map collections, the Metropolitan Toronto Library and the National Map Collection of the Public Archives of Canada. There are three institutions from Alberta, three from British Columbia, two from Manitoba, one from New Brunswick, one from Nova Scotia, thirteen from Ontario, two from Quebec and one from Saskatchewan. Twenty-four of the institutions first contributed their data between 1977 and 1980, and updated the information in 1984; the other two participants only joined the project in 1984.

The entries in this publication do not have the degree of precision of entries prepared according to such standards as the *Anglo-American Cataloguing Rules*. For each map series the list presents the principal elements making it possible to identify the series and refer the user to the Canadian institutions possessing it. The only data used were those supplied by the participating institutions, and those contained in a few reference works. The information is not always the same from one work to another, and in many cases it was necessary to make somewhat arbitrary decisions.

A topographic map series was defined as a series in which relief was represented by means of contour lines. For some old map series, those which showed relief by shading were also included. In size, the series described range from one or two to hundreds of sheets. City plans and thematic maps (including those with contour lines) were excluded.

The vast majority of the map series are official publications. A few are published by commercial publishers.

In Canada, the map series appearing here can normally be consulted both in the map libraries that own them and in other map libraries which obtain them through the interlibrary loan system. However, there may be restrictions on certain series. Individuals should always use their local library or map library to borrow a map series held by an institution they cannot visit. Except in a few rare cases, these intercity loans are made at the request of an institution, and not of an individual.

This list was made possible by the co-operation of a large number of persons. We would like to thank in particular the twenty-six map librarians who submitted their data and revised the provisional catalogue. We also wish to thank the Ontario University Library Council, which sponsored the meeting at the University of Toronto on April 25, 1977 where the decision to undertake the project was made, and Miss Joan Winearls, map librarian of the Robarts Library at the University of Toronto, the organizer of this meeting. Within the National Map Collection, the contributions of the following are acknowledged: Mr. Jean-Pierre Guay, Mrs. Ruth Werbin and Miss Francine Lortie who first assembled the data and did the relevant research and Mrs. Francine Cadieux who assisted in the final research and design of the list and saw to the final revision of the data. We also thank Publication Services of the Public Archives of Canada.

Users of this publication who would like to make comments or suggest corrections are invited to contact the Modern Cartography Section, National Map Collection, Public Archives of Canada, 395 Wellington Street, Ottawa, Ontario, Canada K1A 0N3.

Louis Cardinal
Editor

Explanation of Entries

General Remarks

It has not always been possible to positively identify all of the series. Some of the participants group together more than one series while others list them separately, and in many cases, the information necessary to decide whether an entry consisted of one series or several was not available. Thus duplicate entries may exist in the list.

In many entries the same series designation (commonly called series number) is found. This is due to the bibliographic background of the series or to imprecision of the data submitted. The index to series designations at the end of the work groups all of the entries containing the same series designation.

Name of Countries and Regions

The list presents the countries and regions of the world in alphabetical order. *Names of Countries, Territories and Other Areas Recommended by the Advisory Committee on Names Outside Canada for Official Canadian Use* (1982) was used, with a few exceptions.

As many cross references as were thought necessary were made for easy use of the list. We could not always rely solely on geographical dictionaries in defining certain regions because the regions represented on the map series of the list are often not covered by conventional definitions.

Entries

As a general rule, the entries for each country appear under the present name of the country. For example, map series on the New Hebrides are under Vanuatu, the name of these islands since they became independent in 1980. There are, however, exceptions. Thus the Gilbert and Ellice Islands are now the independent countries of Kiribati (Gilbert Islands) and Tuvalu (Ellice Islands). Map series showing only one or the other of these archipelagoes are classified under Tuvalu or Kiribati, as the case may be. Old map series showing all of the "Gilbert and Ellice Islands" appear under the heading "Gilbert and Ellice Islands." There are cross references to this name under Kiribati and Tuvalu.

The map series are listed by country or region in descending order of scale. If there is more than one map series of the same scale, the series are classified in chronological order.

The entries include the following elements:

1. entry number,
2. map series title,
3. scale,
4. time frame,
5. place of publication and name of publisher,
6. series designation (series number) if there is one,
7. symbols of the institutions possessing the series and percentage of published sheets of the map series possessed by each institution.

1. Entry number

The entries are numbered consecutively from 1 to 2046.

2. Map series title

The official title of the series has been used when it is known, for example, if it appears on the series sheets or is indicated in the publisher's catalogue or in cartographic reference works.

When it has not been possible to find the official title, we have used a customary title, the title suggested by the participating institutions or a title provided by the editors. In these cases, an attempt has been made to keep the titles as simple as possible. These titles are placed in square brackets.

3. Scale

The rule was to accept published topographical map series between 1/10 000 and 1/1 000 000 in scale.

Exceptions: — for small entities, the largest scale accepted was 1/1 000
— for maps of the world, the smallest scale accepted was 1/2 500 000

4. Time frame

Dates found in publisher's catalogues or in cartographic bibliographies, or dates appearing on the series sheets have been indicated. This last method poses serious problems, for very often a collection does not contain all the sheets of a series; it is difficult to know whether the time frame given is accurate. In many cases, the participating institutions have suggested up to fifteen different time frames for the same map series. If research in reference works failed to provide a clear answer, the widest time frames proposed by the participants were used. The dates appear in square brackets.

When a map series is still in print, we have indicated only the date on which publication began, followed by a dash. This means that sometimes several editions of a series are grouped, though the publisher treats each as a separate series. In this regard, there is no common practice among the participants, some keeping together all editions of certain series, others treating each separately.

5. **Place of publication and name of publisher**

— The place of publication given is that found on the series sheets or in reference works. When the name of the place of publication is in square brackets, this means that it was determined by research. If it was not possible to determine the place of publication, we indicated [s.l.] — that is, *sine loco*.
— The name given for the publisher is that found on the series sheets or in reference works. If the name of the publisher is in square brackets, this means that it was determined by research. If it was impossible to give a publisher's name, we indicated [s.n.] — that is, *sine nomine*. Where publisher's names are abbreviated in the entries, they are written in full in the list of abbreviations at the beginning of the work.

6. **Series designation** (series number)

Some map series have a designation supplied by the publisher, and others do not. Sometimes two designations can be found on a given map series, if it was published first under one designation by one publisher, and republished later by another publisher under another designation. At the end of the catalogue is an index of designations found in the entries. This index refers the reader to the corresponding entries.

7. **Symbols of the institutions possessing the series and percentage of published sheets of the map series possessed by each institution**

— The institutional symbols used are those appearing in the tenth edition of *Symbols of Canadian Libraries*, published in 1983. The list of institutional names is given at the beginning of the publication.

— The percentage of the series sheets published to date that the institution possesses, is given as a code figure in parentheses following the symbol of the institution. This has been calculated on the basis of the most recent index of each map series. The percentages are coded as follows:

(1) = 1% to 10%
(2) = 11% to 39%
(3) = 40% to 79%
(4) = 80% to 99%
(5) = 100%

For example, for the map series "Jamaica 1:125 000," the indication "OOAMA (5)" means that the National Map Collection possesses 100% of the sheets of this map series published to date.

The percentage statement is sometimes very approximate because in many cases it was very difficult for the participants to calculate this percentage when they did not know how many sheets had been published in the series. In several instances, no approximate percentage could be supplied by the participants.

List of Participants

ACU	University of Calgary
AEUM	University Map Collection, University of Alberta, Edmonton

Introduction

Voici la deuxième édition du *Catalogue collectif des cartes topographiques étrangères dans les cartothèques canadiennes*.

La première édition a paru en quatre volumes en 1973 et 1974. Son titre, *Liste des séries de cartes dans la Section des cartes étrangères* [de la Collection nationale de cartes et plans], était trompeur puisqu'en fait l'ouvrage répertoriait les fonds de dix-huit cartothèques canadiennes.

Cette édition de 2 046 notices a été préparée à partir de données recueillies auprès de vingt-six cartothèques, parmi lesquelles on compte vingt-quatre cartothèques universitaires, la Metropolitan Toronto Library et la Collection nationale de cartes et plans des Archives publiques du Canada. Il y a trois institutions de l'Alberta, trois de la Colombie-Britannique, deux du Manitoba, une du Nouveau-Brunswick, une de la Nouvelle-Écosse, treize de l'Ontario, deux du Québec et une de la Saskatchewan. Vingt-quatre institutions ont d'abord fourni leurs données entre 1977 et 1980 et les ont mises à jour en 1984. Deux institutions se sont jointes au projet en 1984.

Les notices de cette publication ne sont pas de nature catalographique, c'est-à-dire qu'elles n'ont pas le degré de précision que donneraient des notices rédigées selon les *Règles de catalogage anglo-américaines* par exemple. Le catalogue présente pour chaque carte les éléments principaux permettant d'identifier la carte et de référer l'utilisateur aux institutions canadiennes qui en possèdent un exemplaire. On s'en est tenu aux données fournies par les institutions participantes, et celles contenues dans quelques ouvrages de référence. Encore les renseignements ne concordent-ils pas toujours d'un ouvrage à l'autre, et dans bien des cas, il a fallu trancher un peu arbitrairement.

On a défini par carte topographique une carte sur laquelle le relief est représenté au moyen de courbes de niveau. Pour quelques cartes anciennes, on a aussi retenu celles qui montrent le relief par l'estompage. Certaines cartes sont constituées d'un ou deux feuillets; dans d'autres cas il y en a des centaines. Les cartes de ville n'ont pas été retenues, de même que les cartes thématiques, même celles qui ont des courbes de niveau.

La très grande majorité des cartes sont des publications officielles. Quelques-unes seulement sont publiées par des éditeurs commerciaux.

Au Canada, les cartes décrites ici peuvent être consultées dans les cartothèques qui les possèdent, ou dans les autres institutions par le prêt entre bibliothèques. La consultation de certaines cartes peut cependant être réglementée. Les particuliers doivent toujours passer par leur bibliothèque ou leur cartothèque locale pour emprunter une carte d'une institution où ils ne peuvent se rendre. Sauf en de rares exceptions, ces prêts se font à la demande d'une institution, non pas d'un particulier.

La réalisation de ce catalogue a été rendue possible grâce à la collaboration d'un grand nombre de personnes. Nous voudrions remercier en particulier les vingt-six cartothécaires qui ont soumis leurs données et révisé le catalogue provisoire; l'Ontario University Library Council, qui a parrainé, à l'université de Toronto le 25 avril 1977, la réunion qui est à l'origine du projet; M^lle^ Joan Winearls, cartothécaire de la bibliothèque Robarts à l'université de Toronto, organisatrice de cette réunion; à la Collection nationale de cartes et plans, M. Jean-Pierre Guay, M^me^ Ruth Werbin et M^lle^ Francine Lortie qui ont procédé au premier regroupement des données et effectué les recherches pertinentes, et M^me^ Francine Cadieux qui a participé à la recherche finale et à la conception définitive du catalogue, et vu à la dernière révision des données. Nous remercions également le Service des publications des Archives publiques du Canada.

Nous invitons les utilisateurs de ce catalogue à faire part de leurs commentaires ou à suggérer des corrections en communiquant avec la Section de la cartographie moderne, Collection nationale de cartes et plans, Archives publiques du Canada, 395, rue Wellington, Ottawa, Canada, K1A 0N3.

Louis Cardinal,
rédacteur en chef.

Présentation du catalogue

Remarque générale

Il n'a pas toujours été possible d'identifier de façon définitive toutes les cartes. Certains participants regroupent plusieurs cartes, d'autres les indiquent séparément, et il manquait souvent les renseignements nécessaires permettant de décider s'il s'agissait d'une seule carte ou de plusieurs, et dans ce dernier cas, lesquelles au juste. C'est pourquoi, il arrive que plus d'une notice décrive une même carte.

Le même symbole de carte (communément appelé numéro de série) se retrouve aussi parfois dans plusieurs notices. Cela tient autant à l'histoire bibliographique des cartes qu'à l'imprécision de certains renseignements fournis. L'index des symboles de cartes à la fin de l'ouvrage regroupe toutes les notices où un symbole se retrouve.

Noms de pays et régions

Le catalogue présente les pays et les régions du monde en ordre alphabétique. Nous avons utilisé, à quelques exceptions près, *Noms usuels de pays, territoires ou autres zones recommandés par le comité consultatif sur les noms étrangers pour usage officiel au Canada* (1982).

Nous avons fait autant de renvois qu'il a été jugé nécessaire pour rendre le catalogue facile à utiliser. On n'a pas pu toujours s'en tenir aux dictionnaires géographiques pour définir certaines régions, car les régions représentées sur les cartes du catalogue débordent souvent les définitions conventionnelles.

Notices

Les notices figurent, en règle générale, sous le nom actuel du pays. Par exemple, les cartes des Nouvelles-Hébrides se trouvent sous Vanuatu, nom de ces îles depuis leur indépendance en 1980. Il y a cependant des exceptions. Ainsi les îles Gilbert et Ellice constituent maintenant les pays indépendants de Kiribati (îles Gilbert) et Tuvalu (îles Ellice). Les cartes montrant uniquement l'un ou l'autre de ces archipels sont classées sous Tuvalu ou Kiribati, selon le cas. Les anciennes cartes montrant l'ensemble « îles Gilbert et Ellice » figurent sous la vedette « Gilbert et Ellice, Îles ». Il y a des renvois à ce nom sous Kiribati et Tuvalu.

Les cartes sont décrites par pays ou région, de la plus grande à la plus petite échelle. S'il y a plusieurs cartes à la même échelle, elles sont classées en ordre chronologique.

Les notices comprennent les éléments suivants :

1. numéro de la notice,
2. titre de la carte,
3. échelle,
4. dates extrêmes,
5. lieu de publication et nom de l'éditeur,
6. symbole de la carte (numéro de série) s'il y a lieu,
7. sigles des institutions qui possèdent la carte, et pourcentage des feuillets publiés que possèdent les institutions.

1. Numéro de la notice

Les notices sont numérotées consécutivement de 1 à 2046.

2. Titre de la carte

Lorsqu'il est connu, nous avons utilisé le titre officiel de la carte, soit que le titre apparaisse sur les feuillets de la carte, soit qu'il soit indiqué dans le catalogue de l'éditeur, ou dans des ouvrages de référence cartographiques.

Lorsque nous n'avons pu trouver le titre officiel, nous avons utilisé un titre reconnu par l'usage, ou le titre suggéré par les institutions participantes, ou bien un titre donné par les rédacteurs. Dans ces cas, nous nous en sommes tenus à des titres les plus simples possible. Ces titres sont mis entre crochets.

3. Échelles

Nous avons retenu les cartes topographiques publiées entre les échelles de 1/10 000 et de 1/1 000 000.

Exceptions : *i*) pour les petites entités, la plus grande échelle retenue est de 1/1 000;
ii) pour les cartes du monde, la plus petite échelle conservée est de 1/2 500 000.

4. Dates extrêmes

Nous avons indiqué les dates relevées dans les catalogues des éditeurs, ou dans les bibliographies cartographiques, ou encore les dates apparaissant sur les feuillets de la carte. Cette dernière façon pose de sérieux problèmes, car très souvent la collection ne comprend pas tous les feuillets d'une carte; il est donc difficile de savoir s'il s'agit des véritables dates extrêmes. Dans bien des cas, les institutions participantes ont suggéré jusqu'à quinze paires de dates extrêmes différentes pour une même carte. Lorsque

la recherche dans les ouvrages de référence ne pouvait indiquer des dates avec certitude, nous avons indiqué les dates les plus extrêmes proposées par les participants. Ces dates sont entre crochets.

Lorsqu'une carte est encore disponible, nous avons seulement mis la date de début de publication, suivie d'un tiret. Cela regroupe parfois plusieurs éditions de la carte, même lorsque les éditeurs traitent chaque édition comme une carte différente. La pratique des participants n'est pas uniforme, certains traitant séparément chacune des éditions, d'autres les réunissant.

5. **Lieu de publication et nom de l'éditeur**

— Lieu de publication : celui relevé sur les feuillets de la carte, ou celui indiqué dans les ouvrages de référence. Le lieu de publication est entre crochets lorsqu'il a été établi grâce à des recherches. Lorsqu'il n'a pas été possible de le déterminer, nous avons inscrit [s.l.], c'est-à-dire *sine loco*.

— Nom de l'éditeur : celui relevé sur les feuillets de la carte, ou celui indiqué dans les ouvrages de référence. Le nom de l'éditeur est entre crochets lorsqu'il a été établi grâce à des recherches. Lorsqu'il n'a pas été possible de le trouver, nous avons inscrit [s.n.], c'est-à-dire *sine nomine*. Les noms d'éditeurs apparaissant sous forme abrégée dans les notices sont écrits au long dans la liste des abréviations au début de l'ouvrage.

6. **Symbole de la carte** (numéro de série)

Plusieurs cartes portent un symbole d'identification donné par l'éditeur, d'autres n'en ont pas. On relève parfois deux symboles sur une carte, celui donné par le premier éditeur, et un second donné par un autre éditeur lors d'une réédition. On trouve à la fin du catalogue un index des symboles relevés dans les notices. Cet index renvoie les symboles des cartes aux notices correspondantes.

7. **Sigles des institutions qui possèdent les cartes, et pourcentage des feuillets que possède chaque institution**.

— Sigles des institutions : ceux qui apparaissent dans la dixième édition de *Sigles des bibliothèques canadiennes* parue en 1983. La liste des institutions et leurs sigles figurent au début du catalogue.

— Pourcentage des feuillets : le chiffre entre parenthèses qui suit le sigle de l'institution indique en code le pourcentage des feuillets publiés que possède l'institution. Le pourcentage a été calculé à partir de l'index le plus récent de chaque carte. Il est codé ainsi :

(1) = 1% à 10%
(2) = 11% à 39%
(3) = 40% à 79%
(4) = 80% à 99%
(5) = 100%

Par exemple, à la carte « Jamaica 1:125 000 », la mention « OOAMA (5) » indique que la Collection nationale de cartes et plans possède 100% des feuillets publiés.

Le pourcentage est parfois très approximatif, car dans plusieurs cas les participants ont eu du mal à l'établir, surtout quand ils ne savaient pas le nombre de feuillets publiés. La parenthèse est parfois vide.

Liste des participants

ACU	University of Calgary (Université de Calgary)
